# Steps to follow:
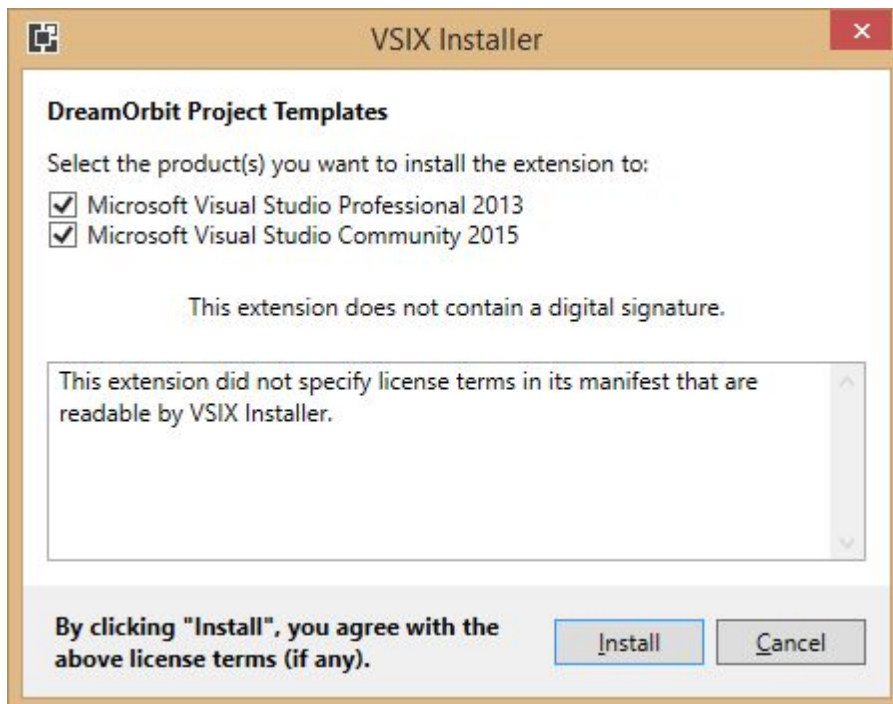

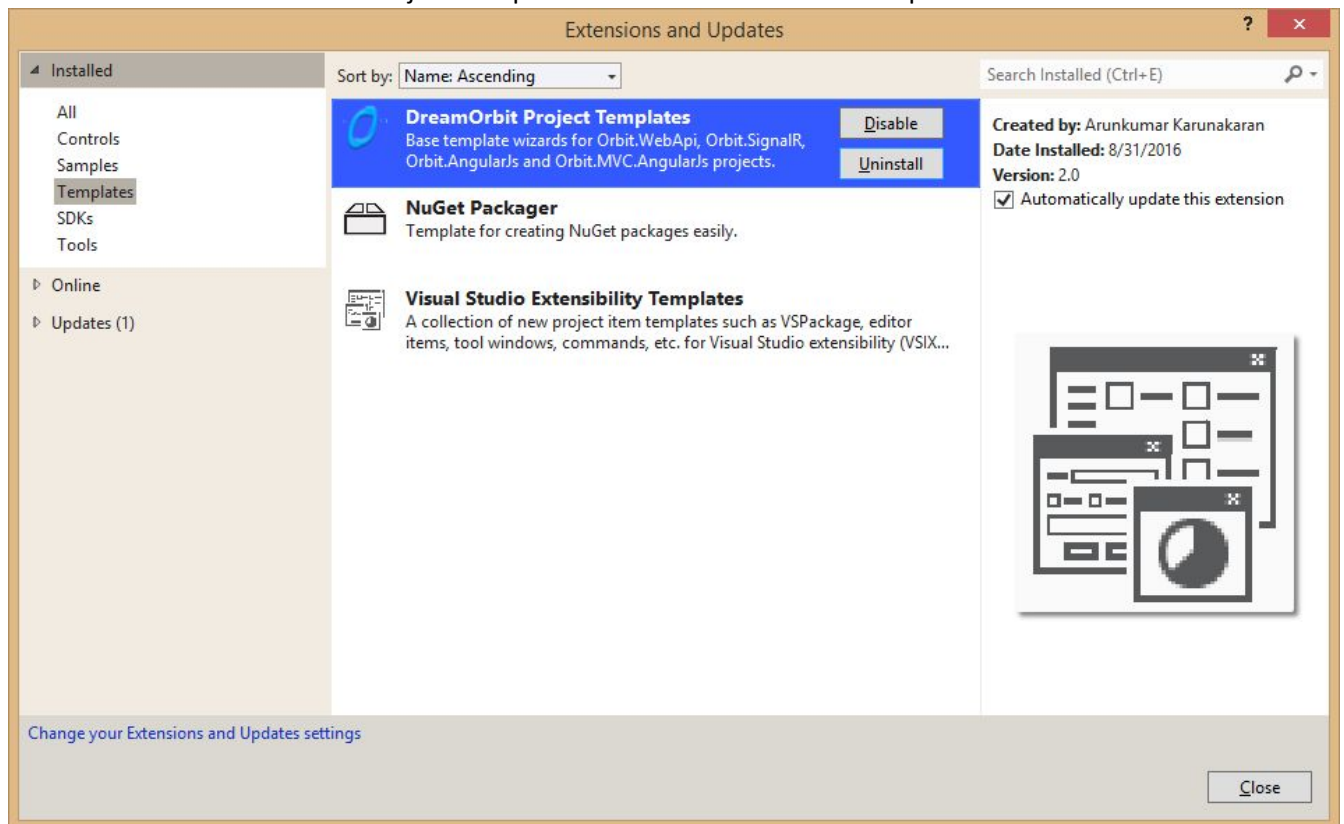

1. Download and Install "OrbitWizard.vsix"

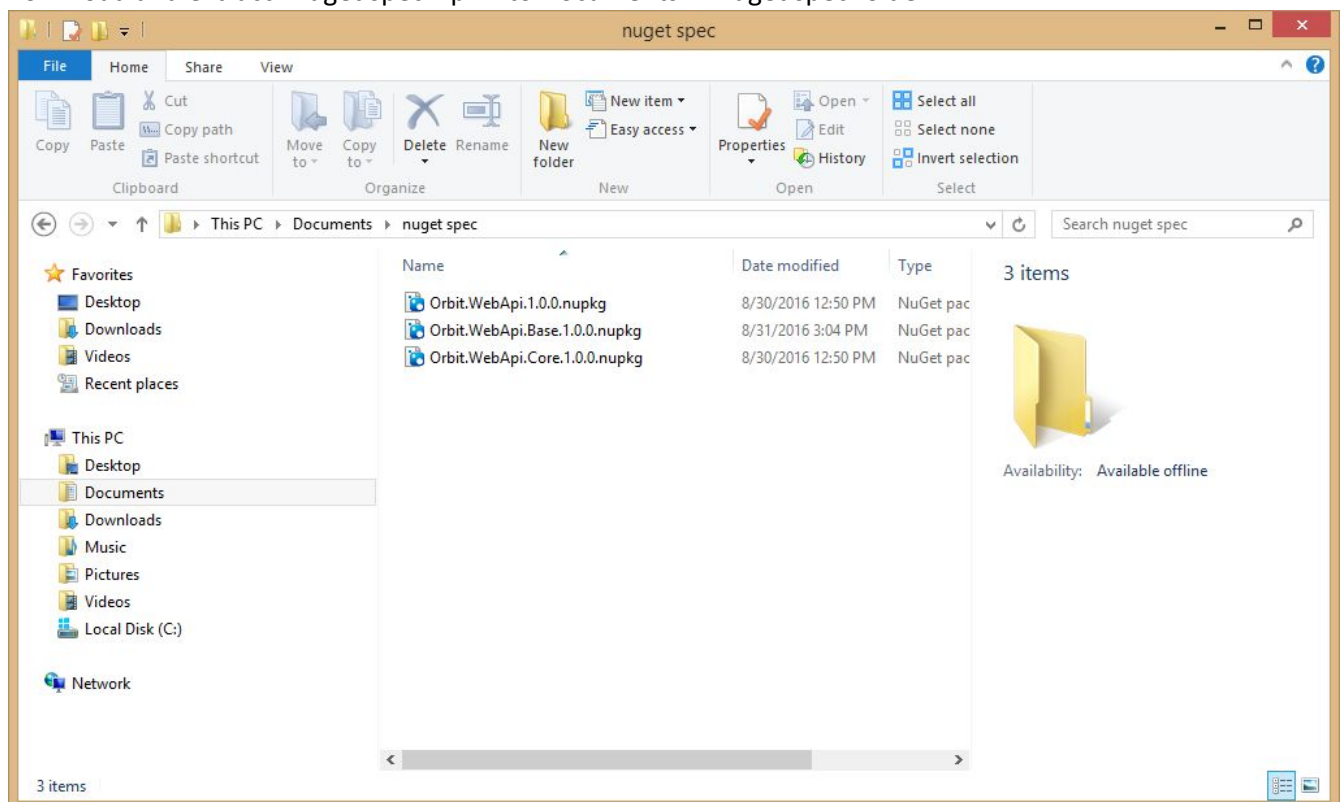

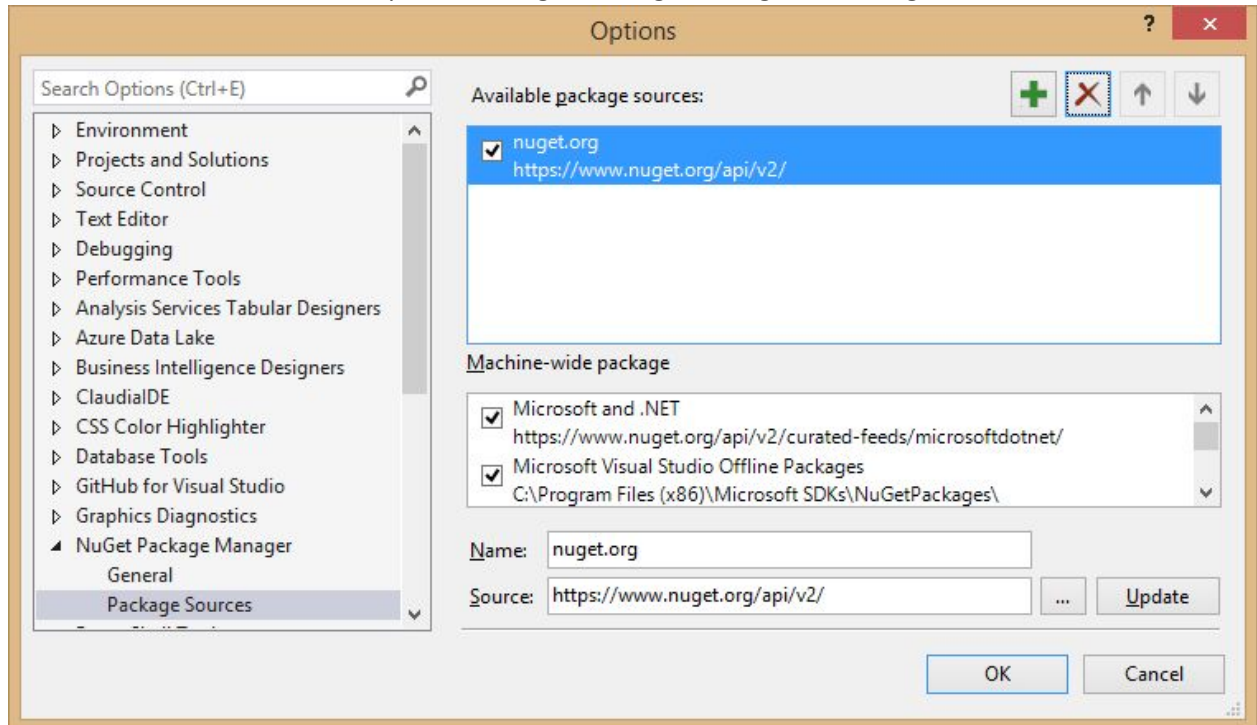

OrbitWizard.vsix

Once installation is completed open your Visual Studio -> Tools -> Extensions and Updates…
You can see the "DreamOrbit Project Templates" under in Installed -> Templates section.

2. Download and extract "nuget spec.zip" into Documents -> nuget spec folder.

Goto Visual Studio -> Tools -> Options -> Nuget Package Manager -> Package Sources

Click **+** icon and set the Name and Source to it. Then hit Update button.

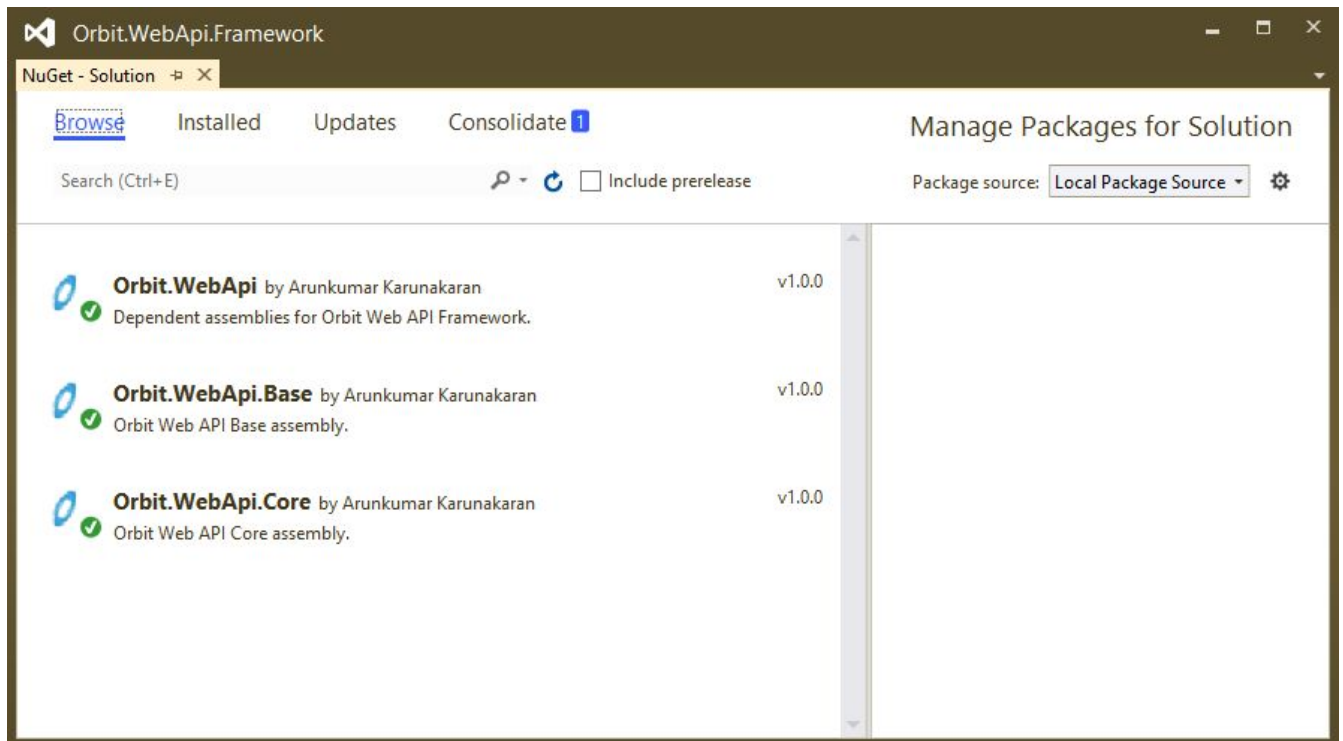

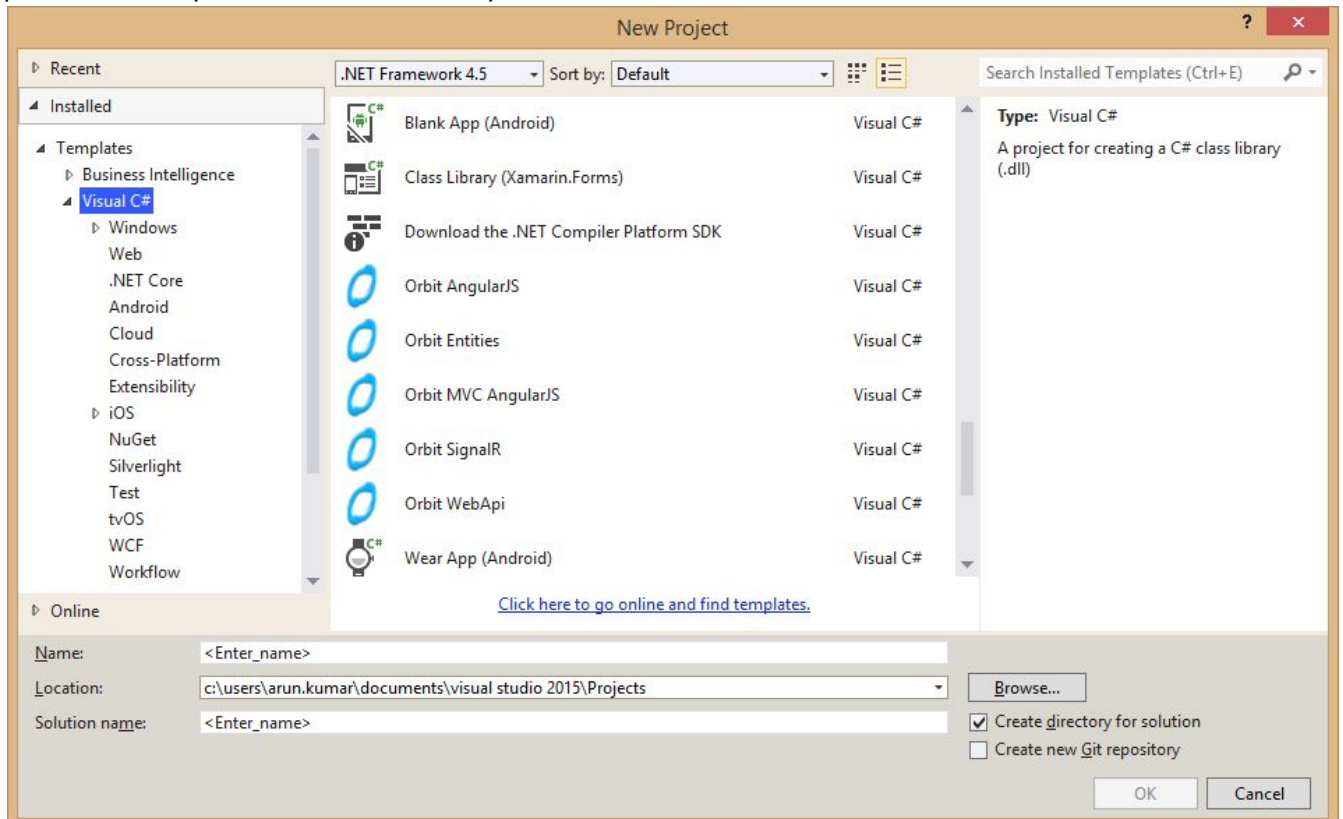

Name: your desired name
Source: the location where you have copied the nuget spec files.
i.e. "C:\Users\arun.kumar\Documents\nuget spec" folder.

You can see these packages, by opening Nuget Package Manager and select the Package source as "Local Package Source".

3. Now open Visual Studio -> File -> New -> Project...
   Under New Project wizard select Installed -> Templates -> Visual C# and scroll down then you will see three different templates with prefix named as "Orbit" select any and click OK, that particular predefined template will be added into your solution.

Enjoy!!!
